| 77A                                                                                     | <p><b>2011 HGG CNC Pipe Profiler (OFF SITE)-NEW COST TODAY APPROX. \$700,000 US</b></p> <p>Model: SPC 500, 3-Phase 230V/400V, Can be used w/ or w/o its buffer (infeed and outfeed) system*, Cuts multiple chamfers, holes, slots, miter holes, miter saddles, etc., Pipe range: 48 - 510mm, No max pipe length but infeed is designed for up to 12m, Biaxial cutting head, Initialization laser point, Vertical out-of-roundness compensation, Kjellberg FineFocus 450 air plasma, 31mm max wall thickness, Fume exhaust system incl Donaldson filter unit, 15" flat screen operator interface.</p> <p>2011 HGG CNC Pipe Profiler</p> <p>*Description and operational sequence of HGG SPC 500 with In-feed and out feed system:</p> <p>Infeed:<br/>A conveyor system of 13.5m by 570mm is used to move the pipes through the wall and chuck (up to 510mm) on to the gutter ball tray on the cutting machine. There are 10 electrically powered diablo rollers to move the pipe across on the conveyor system.</p> <p>Integrated with the conveyor is a buffer table to:<br/>A) Store pipes<br/>B) Deliver pipe to the conveyor system.</p> <p>The buffer table has 6 arms that are 4.5m long each. In a neutral position the arms are sitting just below the diablo roller on the conveyor. While in this position pipes can be loaded on the buffer table. Each arm has a chain that is controlled electrically and synchronized in travel speeds. The chain system incorporates stops that prevent the pipes to roll forward or backwards.</p> <p>Loading a pipe from the buffer table to conveyor:<br/>From the infeed remote control panel the sequence of loading pipe can start:</p> |

| 77A<br>CONT                                                                             | <p>A) Move the hydraulics driven arm up (the arms move from below the diablo rollers to above diablo rollers).</p> <p>B) Move pipe to end of arm (completed by chain drive).</p> <p>C) Lower arms (once the arms are below the rollers, the pipe will be supported by the roller.)</p> <p>D) Turn on diablo rollers and move pipe through the chuck.</p> <p>E) Turn off diablo rollers</p> <p>Once the pipe is through the chuck the pipe is easily moved manually back and forth on the gutter ball system. Move pipe back by chuck and hydraulically clamp the pipe. Now it is ready to process pipe.</p> <p>Outfeed:<br/>Any cut off piece can be easily pushed to the out feed conveyor. At the beginning of the conveyor there is a sensor that detects the edge of the pipe. This will initiate the electrically powered diablo rollers to turn on.</p> <p>Once the sensor detects that there is no more material the diablo rollers will stop. For safety reasons another sensor has been add at the far side of the out feed conveyor – if it detects an edge of a pipe it will turn the diablo rollers off preventing any pipe to fall off. Removing pipe from outfeed conveyor to buffer table:<br/>Integrated in the out feed conveyor there are seven hydraulically driven sloped levelers sitting below the diablo rollers. These levelers are designed with a 2 degree slope. Once initiated from the out feed remote control panel these levelers come up from below the rollers and raise the pipe above the diablo rollers.</p> <p>With the built- in 2 degrees slope on the levelers they will gravity feed an outfeed buffer rack (not included) that is level with conveyor table. Pipe can outfeed to either direction (toward or away from operator) to suit shop layout.</p> <p><b>MACHINE IS OFF SITE APPROXIMATELY 5 MINUTES FROM MODERN TOOL CALGARY</b><br/><b>CONTACT: Brandon Hindbo to view - 403-968-0519</b></p> |
